CONTENTS OF VOLUME 100

NUMBER 1, NOVEMBER 15, 1979

REVIEW

Use of Endo- and Exoglycosidases for Structural Studies of Glycoconjugates
Akira Kobata 1

CARBOHYDRATES

Sialic Acid Interference with the Thiobarbituric Acid Method for Measuring 3-Deoxy-octulosonic Acid *Steven S. Kuwahara and Mary C. Snetting* 118

CHROMATOGRAPHIC AND ELECTROPHORETIC TECHNIQUES

Curve Fitting for Immunoelectrophoresis *Utz W. Mueller and Julia M. Potter* 51

Polyacrylamide Slab Gel Electrophoresis: An Improved Design
Andrew C. C. Broadmeadow and Peter A. Wilce 87

New Procedure of High-Voltage Electrophoresis in Polyacrylamide Gel and Its Application to the Sequencing of Nucleic Acids
T. V. Kutateladze, V. D. Axelrod, V. G. Gorbulev, S. N. Belzhelarskaya, and R. M. Vartikyan 129

ENZYMATIC ASSAYS AND ANALYSES

A New Assay for L-Aspartate:2-Oxoglutarate Aminotransferase
Toshiharu Yagi, Hiroyuki Kagamiyama, Shigeki Ohtawara, Kenji Soda, and Mitsuhiro Nozaki 20

A New and Highly Sensitive Fluorescence Assay for Collagenase-like Peptidase Activity *Kohichi Kojima, Hideko Kinoshita, Takeshi Kato, Toshiharu Nagatsu, Katsumi Takada, and Shumpei Sakakibara* 43

Immobilization Technique as a Possible Method for Determination of Enzyme Structures, Applied to the System Urease/Aluminium Hydroxide
Peter Grunwald, Walter Gunsser, Fred R. Heiker and Wolfgang Roy 54

A Sensitive Fluorimetric Assay for γ-Glutamyl Transferase
G. D. Smith, J. L. Ding, and T. J. Peters 136

A New and Highly Sensitive Voltammetric Assay for Aromatic L-Amino Acid Decarboxylase Activity by High-Performance Liquid Chromatography
Toshiharu Nagatsu, Toshifumi Yamamoto, and Takeshi Kato 160

IMMUNOLOGICAL PROCEDURES

Comparison of Two Methods of Preparing Enzyme–Antibody Conjugates: Application of These Conjugates for Enzyme Immunoassay *Michael J. O'Sullivan, Ernesto Gnemmi, David Morris, Giorgio Chieregatti, Alan D. Simmonds, Madeleine Simmons, James W. Bridges, and Vincent Marks* 100

INORGANIC AND METALLOORGANIC COMPOUNDS

An Improved Assay for Nanomole Amounts of Inorganic Phosphate
Peter A. Lanzetta, Lawrence J. Alvarez, Peter S. Reinach, and Oscar A. Candia 95

A New Route to "Bifunctional" Chelating Agents: Conversion of Amino Acids to Analogs of Ethylenedinitrilotetraacetic Acid
Simon M. Yeh, David G. Sherman, and Claude F. Meares 152

INSTRUMENTATION AND SPECIAL TECHNIQUES

A Low-Cost Polyacrylamide Gel Scanning Densitometer *David K. Shortess* 15

A Flow Calorimeter for Assay of Hormone- and Metabolite-Induced Changes in Steady-State Heat Production by Tissue *Paul C. Anderson and Rex E. Lovrien* 77

A Simple Centrifuge Column for Desalting Protein Solutions *Richard I. Christopherson, Mary Ellen Jones, and Lloyd R. Finch* 184

NUCLEIC ACIDS AND PROTEIN SYNTHESIS

Quantitative High-Pressure Liquid Chromatographic Analysis of Methylated Purines in DNA of Rats Treated with Chemical Carcinogens *Deborah C. Herron and Ronald C. Shank* 58

An Improved Method for the Purification of Higher Plant Ribosomal RNA Labeled on the Methyl Groups *J. P. Cecchini and R. Miassod* 70

Removal of DNA from RNA by Chromatography on Acetylated *N*-[*N'*-(*m*-Dihydroxylborylphenyl)Succinamyl]aminoethyl Cellulose *Steven Ackerman, Barbara Cool, and John J. Furth* 174

Improved Microfluorometric DNA Determination in Biological Material Using 33258 Hoechst *C. F. Cesarone, C. Bolognesi, and L. Santi* 188

PEPTIDES, AMINO ACIDS, AND AMINO ACID DERIVATIVES

A Simple and Sensitive Assay for 1-Aminocyclopropane-1-Carboxylic Acid *M. C. C. Lizada and Shang Fa Yang* 140

PHYSICAL TECHNIQUES

Method for Quantitative Analysis of 16,16-Dimethyl-prostaglandin E_2 from Plasma Using Deuterated Carrier and Gas Chromatography–Mass Spectrometry *S. Steffenrud and F. H. Lincoln* 109

PROTEIN ANALYSES AND REAGENTS

Quantitation of Proteins Solubilized in Sodium Dodecyl Sulfate–Mercaptoethanol–Tris Electrophoresis Buffer *Zahur Zaman and Robrecht L. Verwilghen* 64

A Method for the Estimation of Proteins in Colored or Turbid Solutions *Diana Davies and Eric S. Holdsworth* 92

Effect of Sodium Hydroxide upon Protein Binding to Filter Paper Disks and Its Significance in the Determination of Protein in Colorimetric and Radioisotopic Assays *J. P. Durham and R. O. Lopez-Solis* 98

PURIFICATION OF ENZYMES AND PROTEINS

Purification of Guanosine Triphosphate Cyclohydrolase I and Dihydrofolate Reductase on a Dihydrofolate–Sepharose Affinity Column *Rudolf L. Then* 122

Separation of Enzymatic Activities in *Dictyostelium discoideum* by High-Pressure Gel Permeation Chromatography *Jessica L. Hodge and Edward F. Rossomando* 179

SUBCELLULAR FRACTIONS AND SEPARATION

A Detergent–Citric Acid Technique for Isolating Nuclear and Cytoplasmic Fractions Containing Undegraded RNA from Cells of *Xenopus laevis* *Leo Miller* 166

LIPIDS AND LIPOPROTEINS

A Rapid and Sensitive Method for the Determination of the Lithogenic Index of Bile by Thin-Layer Chromatography and Densitometry Using a Dual-Wavelength Chromatoscanner *Akihiro Kibe, Taiju Kuramoto, and Takahiko Hoshita* 146

METABOLITE DETERMINATION

Fluorometric Study of the Partition of Bilirubin among Blood Components: Basis for Rapid Microassays of Bilirubin and Bilirubin Binding Capacity in Whole Blood *Angelo A. Lamola, Josef Eisinger, William E. Blumberg, Samantha C. Patel, and Jorge Flores* 25

Book Reviews 198

Number 2, December 1979

REVIEW

Review of the Folin Phenol Protein Quantitation Method of Lowry, Rosebrough, Farr and Randall *Gary L. Peterson* 201

CARBOHYDRATES

A Micromethod for the Quantitation of Sialoglycoconjugate Immobilization on Insoluble Supports: Its Use in the Preparation of Supports with Varying Ligand Concentration *A. P. Corfield, T. L. Parker, and R. Schauer* 221

CHROMATOGRAPHIC AND ELECTROPHORETIC TECHNIQUES

New Strategy for the Characterization of Amino Acids by Thin-Layer Electrophoresis and Thin-Layer Chromatography Using Acidic Mobile Phases *Roger L. Munier and Sylviane Meunier* 254

Determination of Free and Conjugated Bile Acids as Ultraviolet-Absorbing Ion Pairs by Reverse-Phase High-Performance Liquid Chromatography *Nicholas Parris* 260

Countercurrent Chromatography with a New Horizontal Flow-Through Coil Planet Centrifuge *Yoichiro Ito* 271

Analytical Techniques for Cell Fractions. XXVI. A Two-Dimensional Electrophoretic Analysis of Basic Proteins Using Phosphatidyl Choline/Urea Solubilization *Karen E. Willard, Carol Smith Giometti, N. Leigh Anderson, Timothy E. O'Connor, and Norman G. Anderson* 289

A Preparative Gel Electrophoresis Apparatus for Large Scale Separations *E. M. Southern* 304

Measurement of DNA Length by Gel Electrophoresis *E. M. Southern* 319

Effect of the Composition of Sodium Dodecyl Sulfate Preparations on the Renaturation of Enzymes after Polyacrylamide Gel Electrophoresis *Sanford A. Lacks, Sylvia S. Springhorn, and Allan L. Rosenthal* 357

ENZYMATIC ASSAYS AND ANALYSES

A Method for the Determination of Alkaline Ribonuclease (EC 3.1.4.22) Activity in Human Serum *P. H. Scott* 233

The Measurement of Cyclic GMP and Cyclic AMP Phosphodiesterases *Joyce G. Carter, Sosamma J. Berger, and Oliver H. Lowry* 244

The Use of Radioiodinated Protein Substrates for the Assay of Trypsin and the Hatching Enzyme from the Amphibian *Xenopus laevis*
Umbert A. Urch, Tatsuro Nishihara, and Jerry L. Hedrick 352
An Improved Rapid Assay of Glycogen Synthase
Emma Villa-Moruzzi, Teresa Locci-Cubeddu, and Ettore Bergamini 371

INORGANIC AND METALLOORGANIC COMPOUNDS

A Chemical and Spectral Characterization of the Extrapallial Fluid of *Mytilus edulis*
Milton J. Misogianes and N. Dennis Chasteen 324

INSTRUMENTATION AND SPECIAL TECHNIQUES

A Microfuge Tube Technique for Disrupting Microquantities of Fungal Spores
Wayne C. Richards and Shozo Takai 240

PEPTIDES, AMINO ACIDS, AND AMINO ACID DERIVATIVES

Analysis of Phenylthiohydantoin Amino Acids by High-Performance Liquid Chromatography on DuPont Zorbax Cyanopropylsilane Columns
N. D. Johnson, M. W. Hunkapiller, and L. E. Hood 335

PROTEIN ANALYSES AND REAGENTS

A Method for the Quantitative Determination of Protein Incorporated in Solubilizable Polyacrylamide Gels *Johan Tas, Alfons C. J. de Vries, and René G. Berndsen* 264
An Electrochemical Approach to Quantitation and Characterization of Metallothioneins *R. W. Olafson and R. G. Sim* 343

PURIFICATION OF ENZYMES AND PROTEINS

Purification of Malic Enzyme from Bovine Heart Mitochondria by Affinity Chromatography *Trinidad Caldés, Hasmukh R. Fatania, and Keith Dalziel* 299

SUBCELLULAR FRACTIONS AND SEPARATION

A Rapid High-Yield Isolation Method for Nuclear Envelope Ghosts
Günter Giese and Frank Wunderlich 282

LIPIDS AND LIPOPROTEINS

Simple Procedures for the Rapid Cleavage of Ester Lipids and for the Large-Scale Isolation from Brain of Cerebroside Sulfate
Atsushi Hara and Norman S. Radin 364

METABOLITE DETERMINATION

A Microassay for Analysis of Serum Sulfate
D. E. C. Cole, F. Mohyuddin, and C. R. Scriver 339
ERRATUM 373
AUTHOR INDEX FOR VOLUME 100 374
CUMULATIVE SUBJECT INDEX FOR VOLUMES 92–100 376

INFORMATION FOR AUTHORS[1]

Analytical Biochemistry will publish articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation, including those areas of immunology that include analytical and preparative methods for application by biochemists, cell and tissue culture techniques, and purification methods for specific enzymes and other proteins when such work has resulted in a high level of purity. Areas such as methods for sequencing and synthesizing DNA and RNA will be included. Invited review articles dealing with timely topics in methodology will also be published. In addition, book reviews covering titles directly related to the scope of the Journal and, specifically, to analytical and preparative methods in biochemistry and such impinging fields as immunology and tissue culture, will be published.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted to **Analytical Biochemistry, Editorial Office, 111 Fifth Avenue, New York, N. Y. 10003.**

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. At least three copies should be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. **Also, on the title page, authors should indicate the appropriate subject category for listing in the Table of Contents.** Please number all pages of the manuscript.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Information for Authors, appearing in the first issue of each year of this journal.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is 8½ × 11 inches (21 × 27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

---

[1] An extended Information for Authors is published in the first issue of each year. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

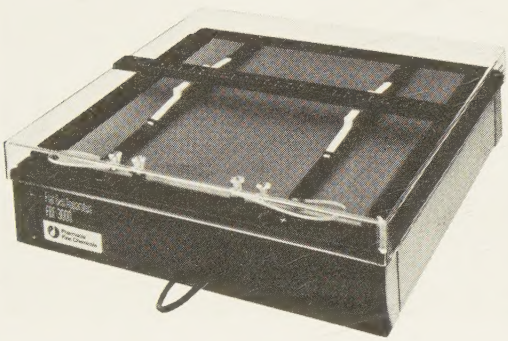
Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in Chemical Abstracts' *Service Source Index* (1969 Edition). Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Chattoraj, D. K., and Bull, H. B. (1971) *Arch. Biochem. Biophys.* **142,** 363–370.
2. Gottschalk, A. (1960) *in* The Enzymes (Boyer, R. D., Lardy, H. A., and Myrback, K., eds.), 2nd ed., Vol. 2, pp. 461–467, Academic Press, New York.
3. Meister, A. (1957) The Biochemistry of Amino Acids, p. 298, Academic Press, New York.

Proofs. Galley proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered on the form provided.

Systems from Pharmacia Fine Chemicals



Isoelectric focusing

An integrated system for flat bed isoelectric focusing and electrophoresis comprising

Pharmalyte™

Flat-Bed Electrophoresis Apparatus FBE 3000

Electrophoresis Constant Power Supply ECPS 2000/300

Sephadex® IEF

Agarose

Electrophoresis

A versatile system for polyacrylamide gel electrophoresis in both vertical slabs and rods

Gel Electrophoresis Apparatus GE-4

Gel Destainer GD-4

Destainer Power Supply DPS

Electrophoresis Power Supply EPS 500/400

PAA gels 4/30 and 2/16 gradient gels

Electrophoresis calibration kits

Accessories, a full range of accessories for casting and drying of gels

The ISCO Model 1750 Electrophoretic Sample Concentrator offers you a new way to concentrate macromolecules. It's fast, convenient, inexpensive, non-disruptive, and adaptable to a wide variety of samples.

You can easily concentrate proteins, nucleic acids, certain whole cells and fragments, or any other water soluble macromolecule larger than 3500 MW and having electrophoretic mobility. During concentration, samples may also be separated from non-ionic media such as polyacrylamide gels or density gradient sugar solutions.

The Model 1750 will handle up to four 10 ml samples, normally produces 50-fold concentrations in 90 minutes or less, and allows quick and easy recovery of concentrates. It uses no pumps or gases—samples are concentrated by a combination of electrophoresis and filtration.

Learn more about the versatile Model 1750 Electrophoretic Sample Concentrator and other ISCO instruments. Dial toll free: [**800**] **228-4250** (continental U.S.A. except Nebraska). Or write Instrumentation Specialties Co., Box 5347, Lincoln, Nebraska 68505.
